MONACARE

Home care coordination — built around the patient, the care team and the family.

Tristan Doucet – Physiotherapist in Monaco
Monaco, April 2026

A PROJECT BUILT FROM THE FIELD.

Not a concept from a whiteboard — an observation from daily practice.

The founder of MONACARE is a physiotherapist practicing in Monaco. Every day, he helps coordinating care around vulnerable patients alongside nurses, doctors, home companions and legal guardians.

He knows the system from the inside — and he knows precisely what is missing.

What he kept seeing in practice :

Families calling professionals directly

because no structured channel exists — and receiving incomplete answers.

Updates shared by text message

or simply not shared at all. No one has the full picture.

Every professional doing good work in isolation

without seeing what the others are doing around the same patient.

Curators managing several cases at once

with no consolidated tool — just spreadsheets and phone calls.

Observations and alerts disappearing

into WhatsApp threads, notebooks and informal handovers. Nothing is truly traceable.

When care is uncoordinated, everyone is affected.

Home care involves many professionals — but no shared space connects them.

1

The family is left in the dark

Families often do not know what happened during the nurse's visit, whether the physio came, or what the doctor recommended.

They call. They send messages. They worry. There is no structured way to keep them informed.

2

The team works in silos

A nurse, a physiotherapist, a companion and a doctor can all care for the same patient — without seeing what the others are doing.

No shared record. No shared channel. Just phone calls and informal coordination.

3

Nothing is traceable

Observations, alerts and recommendations exist — but too often disappear into WhatsApp threads, notebooks, or someone's memory.

There is no reliable record of what was done, when, and by whom.

The solution

MONACARE

A shared coordination space for everyone involved in a patient's care — designed for the realities of home care.

- The family stays informed — without having to call anyone.
- The care team shares updates in real time, across every intervention.
- Every observation is logged, traceable, and available when needed.

How it works

Four functions — each solving a real coordination problem.

The Flux

Shared care feed

- Each professional logs what they observed or did.
- Families see relevant updates.
- Medical posts stay restricted to the clinical team. Everyone stays aligned — without a single phone call.

Medical Vault

Secure patient record

- A centralised, biometric-protected space for vital signs, pain tracking and clinical notes.
- Voice dictation for busy professionals.
- One reliable source of truth — accessible from any device.

Role-Based Access

The right view for each user

- Every user — family members, nurse, doctor, or aide — sees only what they need to see.
- No self-registration: each account is validated by a platform administrator before first access.

Professional Messaging

A clean channel for the teams

- Encrypted, structured messaging organised around the patient.
- No personal phones. No WhatsApp threads. A dedicated space for team communication.

The platform in practice

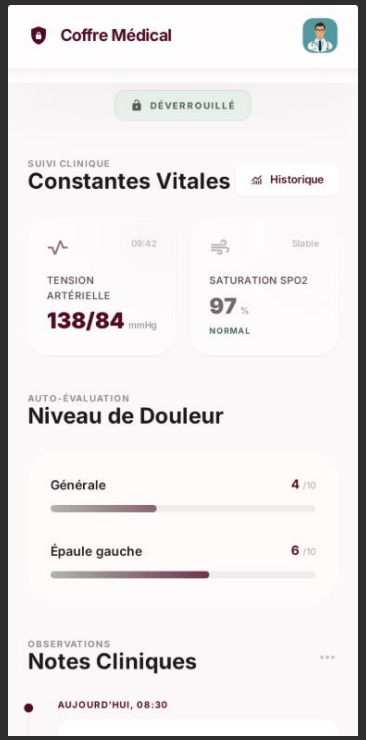
Working prototype available on web and mobile.

Welcome & Login

Role-based onboarding — each user logs in with the access level assigned to them

The Flux

Real-time care feed — updates from nurses, physios, companions and family members in one place



Medical Vault

Biometric-protected patient record — vital signs, pain tracking and clinical dictation

One platform, four roles.

Each user gets exactly the access they need — no more, no less.

F

Family

From EUR29/mo

Receives a personal access code from the care team. Follows the patient's updates, sees who visited and when, and can logs vital signs at home. No more calling around for news.

Informed without asking | Home vital log | Approve access

H

Healthcare Professional

Always free

Nurses, doctors, physiotherapists. Account validated before first login. Posts updates to the Flux, consults the Medical Vault, uses voice dictation for clinical notes.

Full Flux + Vault | Voice dictation | Medical-only visibility

C

Companion / Aide

Always free

Non-medical home workers — housekeepers, helpers, etc. Log their daily visits so the whole care team stays in the picture. No access to clinical data.

Daily activity log | Flux only | No medical data

G

Guardian / Curator

Tiered plan

Legal guardians and professional curators managing several patients at once. A consolidated dashboard across all their cases — with pricing that scales with caseload.

Multi-patient view | Tiered pricing | Full oversight

Why Monaco is the right place to start?

Small enough to move fast. Structured enough to support it. A population with real, daily care needs.

38,857

RESIDENTS

Total population of the Principality, 2025

27.2%

AGED 65+

10,574 residents — more than 1 in 4

14.9%

AGED 75+

5,798 residents more likely to require coordinated home support

204,441

EXTENDED BASIN

People 65+ in surrounding municipalities

A structured care ecosystem

Monaco already has the professionals and the infrastructure. What is missing is a coordination layer that connects them.

- 845 beds & places at CHPG — 443 in geriatric & home care
- 4,168 private-sector employees in health & social services
- IFAS nursing aide training — dedicated local pipeline
- CCIN / Loi n.1165 — independent data protection authority

Sources: CHPG (chpg.mc) / IMSEE Emploi 2025

A population built for long-term care

High life expectancy, engaged families, and a culture of quality care. Home-based support is central to how care is delivered in Monaco.

87.0 years

Life expectancy
Monegasque nationals
Men 84.0 / Women 90.2 (2022–2024)

- Average age of Monegasque nationals: 45.1 years
- Over 15% of Monegasque nationals are 75 or older

Source: IMSEE Observatoire 2024 — data concern Monegasque nationals

Population & basin data: IMSEE Monaco en Chiffres 2025 / imsee.mc

A grounded, step-by-step launch.

Starting with the people who already know the patients — and trust the project.

1

The professional network

The founder's local network — physios, nurses, doctors and curators — is the natural first entry point.

They already work with vulnerable patients and their families. They will be the first users of the platform — and the first to recommend it.

2

The curators & guardians

Professional curators manage multiple patients at once. They have an immediate, practical need for a structured tool.

They are natural early adopters and strong multipliers. Each curator can bring several care situations onto the platform.

3

The families

Once a professional introduces MONACARE, the family receives a simple access code. No complex sales process.

No technical friction. Just an invitation to stay informed — and a clear reason to subscribe.

A simple, considered model.

Free for professionals. Accessible for families. Scalable for curators.

Family Subscription

Paid by the family — professionals are always free.

1 patient	**EUR29 / month**
Additional patient	**+ EUR15 / month**
Healthcare professionals & companions Always free — unlimited per patient.	**FREE**

Guardian / Curator Plan

Sliding scale — all care professionals included free.

Up to 10 patients	**EUR250 / month**
Up to 30 patients	**EUR399 / month**
40+ patients	**Custom**

Revenue grows with each patient added to the platform.

VISION

Building the new standard for coordinated home care.

Starting in Monaco. Built to extend far beyond it.

Where the project is going:

Monaco	The platform becomes a leading coordination tool across Monaco's home care network.
French Riviera	A selective extension to Nice, Cannes and Antibes using the same network-led approach.
Long term	A reference model for cities with high care needs across Europe.

Where we are now:

Ready	Working prototype, live on Vercel.
Ready	Firebase Auth + Firestore — real-time sync operational.
Ready	Role-based access, Medical Vault and Flux all functional.
Next	CCIN declaration and HDS-certified hosting: compliance step before launch.
Next	iOS & Android native apps: on the roadmap.
